

# BURNT TOAST × TATA

**TOASTIE — India's First AI Fashion Stylist for Gen Z**

*Turning Scroll into Style. Style into Sales.*

---

Presented by: Anshul Mittal | Status: Demo & Testing Phase | May 2026

## AGENDA — What We Will Cover Today

---

This presentation walks you through six key areas:

- The Problem — Why Gen Z shoppers are stuck, and what it costs Burnt Toast
- The Solution — Introducing Toastie, the AI stylist built inside Burnt Toast
- How It Works — The full user experience, step by step
- Business Impact — Engagement, conversion, basket size, and revenue
- Why This Beats a Regular Chatbot — The difference that makes this special
- The Road Ahead — Where Toastie goes from here, and what we need to move forward

# THE PROBLEM — The Hidden Cost of 'I Don't Know What to Wear'

---

## Who is Burnt Toast's Customer?

Burnt Toast by Trent Limited is a youth-forward fashion brand launched in August 2025, specifically designed for India's Gen Z. It sits between Zudio and Zara — more trend-driven than Zudio, but more accessible than global fast-fashion labels. India is home to **380 million Gen Z consumers** — the largest youth cohort in the world. Their direct spending power is estimated at \$250 billion annually, with 47% going to fashion & lifestyle. Myntra's Gen Z base alone doubled to 16 million users in a single year.

## Problem 1 — Choice Overload & Decision Paralysis

A typical Burnt Toast collection has hundreds of products. When a 19-year-old opens the site before a college fest, they are not looking for a catalogue — they are looking for a *look*. The result? They browse for 15–20 minutes, feel overwhelmed, and either leave without buying or add one safe item they've seen before. This is **decision fatigue** — one of the biggest silent killers of online fashion conversion.

## Problem 2 — No Personalisation, No Context

Today's website treats everyone the same. There is zero recognition of occasion, body type, style preference, or budget. Research confirms: **50% of fashion purchases are driven by personalisation**. Brands that personalise see conversion rates increase by up to 40%.

## Problem 3 — The Gap Between Discovery & Purchase

Gen Z discovers fashion on Instagram, Pinterest, and YouTube — they see a full look in a Reel, get inspired, then land on an ecommerce site and cannot recreate that look. **76% of Gen Z fashion shoppers discover through social media**. The bridge between inspiration and purchase is broken. Toastie builds that bridge.

# THE SOLUTION — Meet Toastie, Your AI Fashion Stylist

---

**The answer is not more products. The answer is smarter discovery.**

Toastie is an AI-powered fashion stylist — a conversational, visual, intelligent experience built directly inside the Burnt Toast website. It is not a search bar. It is not a filter. It is not a FAQ bot. It is a **personal stylist**, available 24/7, for every customer.

## What Toastie Does in Plain Language

A user opens Burnt Toast's website and simply talks to Toastie: *'I have a college fest this weekend. Y2K-inspired. Budget around ■3,000.'* In seconds, Toastie builds a complete, curated outfit — top, bottom, footwear, bag, and jewelry — from Burnt Toast's real, live catalogue. Every item is shoppable. Every price is real.

Then they say: *'I love this, but can you show me different shoes?'* Toastie swaps just the footwear — keeping the rest intact — and shows three alternatives. The user is co-designing their look in real time, with an AI that understands fashion.

## Three Things That Make Toastie Different

### 1. It Speaks Gen Z's Language

Maps casual language to precise fashion aesthetics: Y2K revival, boho-coastal, urban streetwear, feminine-romantic, minimal-clean, smart-casual, and more.

### 2. It Builds Complete Looks, Not Just Recommendations

Top, bottom, dress, outerwear, footwear, bag, jewelry, watch, hat — styled together. Color harmony, occasion fit, formality level, aesthetic coherence.

### 3. It's Built on Real Products, Not Generic Advice

Every outfit uses actual SKUs from Burnt Toast's live catalogue — real prices, real images, real sizes, direct link to purchase. The recommendation IS the product.

## HOW IT WORKS — The Full User Experience, Step by Step

---

### Step 1 — The Conversation Begins

The customer sees Toastie's chat: 'Hey! What are we dressing for today? ■' They respond in natural language — occasion, mood, budget, vibe. Even 'I don't know, just give me something cute' is enough.

### Step 2 — Toastie Reads the Brief

Claude (Anthropic's AI) parses the message and identifies: Occasion, Aesthetic, Budget, Gender, Preferred colors. This is genuine language understanding — not keyword matching.

### Step 3 — The Outfit is Built

The engine runs across 280+ curated products and selects pieces based on aesthetic alignment, color harmony, formality level, boldness balance, and budget fit.

### Step 4 — The Look is Revealed

Customer sees a complete lookbook card with real images, names, prices, total cost, and a personality-driven vibe label like 'Sunday Brunch Slay' or 'Main Character Energy.'

### Step 5 — The Customer Customises

Swap any piece, filter by subtype (only sneakers), change the whole vibe, lock what they love, set a budget, or add/remove items — all conversationally.

### Step 6 — Add to Cart & Purchase

One click goes to the product page. They arrive with intention — knowing exactly what they want, and wanting all of it.

## KEY FEATURES — Full Capability List

---

### Feature 1 — Complete Outfit Generation

Full styled outfits from a natural language prompt. Covers every slot: tops, bottoms, dresses, outerwear, footwear, bags, JEWELLERY (necklaces, earrings, bracelets, rings, charms), watches, eyewear, hats.

### Feature 2 — Aesthetic Intelligence (8 Style Profiles)

Y2K Revival · Urban Streetwear · Smart Casual · Minimal Clean · Boho Coastal · Preppy Collegiate · Athleisure · Feminine Romantic

### Feature 3 — Occasion Mapping (11 Occasions)

Casual · College · Brunch · Date Night · Party · Festival · Beach · Travel · Work · Active · Wedding

### Feature 4 — Real-Time Slot Swapping

Any individual piece can be swapped without disrupting the rest of the outfit.

### Feature 5 — Footwear Subtype Filter

Sneakers, sandals, loafers, heels, boots, ballerinas, mary janes, mules, platforms — when asked, shows only that type. No mixing.

### Feature 6 — Multi-Outfit Variations

Generates 3 complete outfit options at once, each varying on a specific slot.

### Feature 7 — Budget Intelligence

Works within price constraints across all slots combined.

### Feature 8 — Product Memory & Rejection

Never re-suggests rejected products within a session — gets smarter as the conversation continues.

### Feature 9 — Claude Vision (Image-Based Inspiration)

Upload a photo from Instagram or Pinterest — Toastie recreates the look using Burnt Toast's real catalogue.

### Feature 10 — Brand-Voice Copy Generation

Every outfit gets a branded, Gen Z-native caption in Burnt Toast's voice.

# THE GEN Z OPPORTUNITY — Why Now. Why This Audience.

---

## India's Gen Z — The Numbers That Matter

- **380 million Gen Z consumers** in India — largest Gen Z population of any country in the world
- **\$250 billion** in direct annual spending; 47% goes to fashion and lifestyle
- By 2035, Gen Z projected to drive **\$2 trillion** in total consumer spending in India
- **44%** of all smartphone purchases in India in 2024 came from Gen Z
- Myntra's Gen Z base doubled to **16 million users** in a single year

## How Gen Z Shops

- **76%** discover fashion through social media — Instagram, YouTube Shorts, Pinterest
- **39%** of Indian Gen Z consumers buy fashion after watching Instagram Reels
- **75%** of Gen Z digital commerce happens on smartphones
- **50%** of fashion purchases driven by personalisation
- **61%** actively used AI tools to help with a purchase in the past year
- **75%** are interested in using AI during the shopping process — highest of any generation

## The Competitive Window

**Right now, no Indian fashion brand at Burnt Toast's price point and positioning has an AI stylist. Not Zudio. Not H&M India. Not Bershka. This is a first-mover window. The brand that builds the most trusted AI styling relationship with Indian Gen Z first will capture loyalty that is extremely hard to win back later.**

## BUSINESS IMPACT — Engagement

---

### Metric 1 — Time on Site

Today, a typical fashion ecommerce session in India lasts 3–5 minutes. A Toastie session has narrative momentum. AI-fashion integrations globally show **35–60% increase in session time**. Every additional minute increases the statistical probability of purchase.

### Metric 2 — Return Visits & Retention

Toastie creates a reason to return no static catalogue can provide. Brands using AI personalisation report **40–60% improvement in repeat visit rates** among engaged users.

### Metric 3 — Depth of Catalogue Engagement

Without Toastie: customers discover 10–20 products per session. With Toastie: the engine surfaces products from across the entire 280+ item catalogue based on aesthetic and occasion. **Hidden inventory becomes discovered opportunity.**

### Metric 4 — Net Promoter Effect

When Toastie gives someone a look they love, they screenshot it, share it on Instagram Stories, and tag Burnt Toast. **Organic, user-generated marketing that no ad spend can buy.**

## BUSINESS IMPACT — Conversion & Revenue

---

### Impact 1 — Higher Conversion Rate

AI-powered personalisation in fashion ecommerce increases conversion rates by **30–40%**. Visual search and AI recommendation tools show **27% higher conversion** in controlled studies. Toastie resolves the confidence problem — customers buy with intent, not hope.

### Impact 2 — Larger Average Basket Size

**Without Toastie:** one item, avg ■1,200–1,500. **With Toastie:** complete outfit of 3–5 pieces, avg ■2,500–3,500. Kering's Luce AI app reported **15–20% increase in average order value**. For Burnt Toast, every ■500 increase across 1,000 monthly transactions = **■6 lakh additional monthly revenue with zero extra acquisition cost**.

### Impact 3 — Reduced Return Rates

When customers buy pieces that were styled together, they buy with confidence and context. Lower return rates mean lower logistics cost and higher net margin per order.

### Impact 4 — New Customer Acquisition Through Experience

Toastie is a reason to choose Burnt Toast specifically — not because the products are different, but because the journey of discovering them is better. **In the Gen Z market, experience IS the product.**

## TOASTIE vs. A REGULAR CHATBOT

---

A standard chatbot is a customer service tool — reactive, scripted, with no understanding of aesthetics, no style logic, no ability to build something original. Toastie is a **generative, creative AI system**. The difference is fundamental.

| Dimension                   | Regular Chatbot              | Toastie (AI Stylist)                      |
|-----------------------------|------------------------------|-------------------------------------------|
| <b>Purpose</b>              | Customer service — FAQs      | Creative stylist — builds looks           |
| <b>Output</b>               | Text / order status / policy | Full outfits with real products & prices  |
| <b>Product Knowledge</b>    | Basic info                   | Deep aesthetic intelligence               |
| <b>Personalisation</b>      | Rule-based, scripted         | AI-generated, unique every time           |
| <b>Fashion Intelligence</b> | None                         | 8 aesthetics × 11 occasions × 10 types    |
| <b>User Experience</b>      | Transactional                | Conversational, creative, engaging        |
| <b>Revenue Impact</b>       | Near zero                    | Drives basket size, conversion, loyalty   |
| <b>Brand Value</b>          | Utility                      | Differentiation — no competitor has it    |
| <b>Swapping Logic</b>       | Not applicable               | Intelligent slot replacement + SKU memory |
| <b>Image Understanding</b>  | None                         | Vision AI — recreate look from a photo    |

- A chatbot saves time. **Toastie creates desire.** In fashion, desire drives purchase.
- A chatbot is a cost reduction tool. **Toastie is a revenue generation engine.**
- A chatbot is invisible when it works. **Toastie becomes a brand asset.**

## FUTURE ROADMAP — 4 Phases of Growth

---

### PHASE 1 — APPROVE & REFINE (Current: Q2–Q3 2026)

- Core AI stylist built, tested, and fully functional
- 280+ product catalogue integrated across all categories
- Goal: panel approval, technical validation, real user testing

### PHASE 2 — LAUNCH & LEARN (Q4 2026 – Q1 2027)

- Toastie goes live on burnt-toast.com for all users
- Performance tracking: conversion, basket size, session time, returns
- New: Wishlist integration, 'Shop the Look' pages, WhatsApp/Instagram DM integration

### PHASE 3 — SCALE & PERSONALISE (Q2–Q3 2027)

- User profiles — Toastie remembers your style across sessions
- Size intelligence, loyalty integration, style evolution tracking
- In-store kiosk mode for Burnt Toast physical stores

### PHASE 4 — MONETISE & EXPAND (2028+)

- Trend prediction engine — proprietary signal for buying team
- Cross-brand expansion to Zudio, Westside, Tata CLiQ
- White-label licensing — AI stylist as a platform product

## MARKET OPPORTUNITY — The Size of the Prize

---

### The Indian Fashion Market — Today

- India clothing & apparel market: **\$116.64 billion in 2025**, growing to \$177.70B by 2035
- Online fashion ecommerce: **\$21.6B in 2025** → **\$98.45B by 2032** (24.2% CAGR)
- Fashion ecommerce share growing from 15% (2023) to forecasted 25% by 2030

### Gen Z Fashion Segment

- **380 million** Gen Z consumers in India
- **\$250B** direct annual spending, 47% on fashion/lifestyle
- Projected to drive **\$2 trillion** in total spending by 2035

### AI Fashion Commerce — Global Context

- Generative AI in fashion market expected to reach **\$4.4 billion by 2028**
- **97%** of commerce organisations now have AI plans in place
- AI-powered experiences deliver **30–40% conversion lift** and **15–25% basket size increase**

### The Trent Advantage

- Trent FY25: **■17,353 Cr revenue (+37%)**, 1,043 stores across 242 cities
- Zudio: 765 stores in 235 cities, **crossed \$1 billion in sales** in FY25
- Physical Burnt Toast stores in Bengaluru, Pune, Surat, and Thane — ready for Toastie rollout

## CUSTOMER EXPERIENCE JOURNEY — Before vs. After Toastie

---

Meet Priya. She's 20. She's in Mumbai. She has a college farewell party in three days.

### BEFORE TOASTIE

Priya opens Burnt Toast's website. Types 'dresses' in the search bar. 47 results. She scrolls. Some too formal, some too casual. She opens three tabs, reads descriptions, closes two. Adds one item to cart. Checks Instagram. Sees a perfect Y2K look in a Reel. Goes back to the site. Can't find it. Leaves. Buys from Myntra instead.

**Burnt Toast lost a customer. Not because the product wasn't there. Because the discovery experience failed her.**

### AFTER TOASTIE

Priya opens Burnt Toast. Toastie: *'Hey! What are we dressing for? ■'* She types: *'College farewell. Want to look iconic. Y2K-ish. Budget ■3,500.'*

In 4 seconds, Toastie shows a complete look: Rust-orange co-ord set (■1,299) · Platform sneakers (■1,199) · Mini chain bag (■599) · Hoop earrings + chunky bracelet (■399) · Total: ■3,496 ✓

Label: *'Farewell Queen Energy.'* Caption: *'Low-rise, high vibe. You're not leaving college — you're leaving a legacy.'*

She wants different shoes. 'Can I see heels?' Toastie swaps just the footwear. She picks strappy kitten heels. Screenshots the look. Adds all 5 items to cart.

■3,496 average order. 5 products. 8-minute session. Zero ad spend.

**Burnt Toast didn't just make a sale. It made a loyal customer.**

## DEVELOPMENT STATUS — What's Built, What's Next, What We Need

---

### What Has Been Built (Fully Functional Now)

- ■ Conversational AI interface — Natural language, Claude-powered, Burnt Toast brand UI
- ■ Outfit generation engine — 280+ curated products across all categories
- ■ 8 aesthetic profiles + 11 occasion types
- ■ Real-time slot swapping — any piece in any outfit
- ■ Footwear subtype filter — sneakers, sandals, loafers, heels, boots...
- ■ Budget intelligence, multi-outfit variations, product rejection memory
- ■ Vision AI — recreate a look from a user-uploaded photo
- ■ Claude-generated brand-voice copy for every outfit

### Technology Stack

- Frontend: Next.js 16, React 19, TypeScript
- AI Layer: Anthropic Claude (Sonnet) — language understanding + image vision
- Outfit Engine: Custom TypeScript — built and maintained in-house
- Deployment: Vercel-ready — can go live within days of approval

### What We Need to Proceed

- Panel Approval — integrate Toastie into the live Burnt Toast website
- Live Product Feed Access — Shopify API for real-time inventory sync
- Phase 2 Budget — 3-month engineering runway for analytics, wishlist, social sharing

**Timeline from approval to live: 6–8 weeks.**

# THE ASK — What We Are Asking the TATA Panel For

## What Toastie Is — One Line:

*An AI-powered personal stylist built inside Burnt Toast that turns a shopper's vibe into a complete, shoppable look in seconds — driving higher conversion, larger baskets, and deeper brand loyalty among Gen Z.*

## Where We Stand

- ■ Product is built and functional
- ■ Catalogue integrated (280+ products)
- ■ All core features tested and working
- ■ Technology stack is production-ready
- ■ Zero external dependencies to go live

**All we need is the green light.**

## The Opportunity in Numbers

| Metric            | Current Baseline  | Toastie Target                         |
|-------------------|-------------------|----------------------------------------|
| Avg. Order Value  | ■1,200 – 1,500    | ■2,500 – 3,500 (+80%)                  |
| Session Duration  | 3 – 5 minutes     | 8 – 12 minutes (+120%)                 |
| Conversion Rate   | Industry avg: ~2% | Target: 3 – 4% (+50–100%)              |
| Repeat Visit Rate | Baseline          | +40–60% (AI personalisation benchmark) |
| Return Rate       | Baseline          | Reduced — confidence-driven purchasing |

## The Closing Thought

Burnt Toast was built to be different. Not just another affordable fashion brand — but India's Gen Z fashion identity. Toastie is what makes that difference tangible, digital, and scalable.

Every other feature on a fashion website — better photography, faster shipping, easier returns — can be copied. An AI stylist that knows your vibe, builds your look, and speaks your language is a relationship. And relationships, once built, are remarkably hard to lose.

**Toastie is not a feature. It is Burnt Toast's competitive moat.**

***We are ready to build it. We just need you to say yes.***

*"Turning Scroll into Style. Style into Sales."*
